

I claim:

1. Instant self-applicable hair extensions and method for attachment, said hair extensions comprising:

multiple layers of hair wefts or tracks being sewn together to create the appearance of a more dense hair piece, said hair extensions having single layers of human or synthetic hair wefts consisting of natural or synthetic fibers bound and overlapping each other and sewn together at the base or manufactured seam, the body of the extensions consisting of multiple single layer wefts sewn together to make the hair track appear more dense, when applied to the natural hair of a wearer.

2. The method of cutting the hair tracks specified in claim 1 in various widths at the base, enabling the hair tracks to be separated into various widths and placed in various, desired locations throughout the wearer's natural hair,

3. The method of making a lead track to act as the base track for additional hair wefts or tracks to be sewn parallel to the base track in a slightly disproportionate manner, each additional track is sewn slightly beneath the base of each previous track, the ends of each additional track being sewn approximately one to one and one half inch away from the left and right end points of the track or weft of hair previously sewn thereto, thereby causing the additional tracks that are sewn onto the base or lead track to appear invisible when viewed from the front of the hair piece.

4. The method of sewing the hair tracks or wefts of hair in the manner specified in claim 3 for the purpose of permitting the base of the hair extension to lie flat against the wearers natural hair and to appear completely unnoticeable to an onlooker.

5. The hair extension base to be flexible and work simultaneously with attaching snap-lock clips at the points in which they are sewn together, said base of the hair track or weft consisting of single strands of human or synthetic fibers all intertwined to create a base line also being the foundation for the attaching clips and additional wefts.

6. Snap-lock attachment clips, as the method of attaching the hair extensions specified in claim 1 to the natural hair of a wearer, useful for firmly attaching the hair extensions to a wearer's natural hair.

7. The snap-lock attaching clips are sewn onto the base of the hair track or extension as specified in claim 3 along the top inside edge, the clips being useful for enabling the wearer to instantly and firmly attach or detach the extension to their natural hair,

said clips being typically formed of a thin metal having a slightly curved base with small holes through the bar of the base useful for sewing the clips onto the base of the hair tracks along the top inside edge, said clip has a pliable coated clamping bar extending slightly above the base bar and a single row of small comb-like teeth also having a resilient coating on the free ends of the teeth, useful for sliding the extension onto the wearer's natural hair and firmly locking it in place, said clip, when the base is pressed forward causes the comb-like teeth to expand and move slightly forward and away from the clamping bar, when pressed in the opposite direction the comb-like teeth of the clip converge and snap over-center, pressing the teeth firmly against the clamping bar, allowing the instant hair extension to be snap-locked and firmly grip onto the wearer's natural hair, the hair extension becomes a commercial hair piece adapted to supplement a wearers own natural hair.
